C E R T I F I C A T E - L I C E N S E

Registration No. 000285

Cipher 00014

Code 00015

Discovery, invention, novelty (technology, project etc.): **MODEL**

Grabovoi Grigory Petrovich

Annotation:

The novelty is in the principles of splitting the information based on the postulates of space and time common character in infinity and on the principles of combination of the known properties of space and time and the laws of their mutual development. A method of filing any information through the field of infinite points is discovered. Space is regarded as an immutable structure of time. Time is considered as a function of space, and the point of reproduction of matter - as a consequence of time response to the change of space. These are contact points that are the points of filing of any information, and this makes it possible to create computer-based technological systems. The filed information provides a static design of "intelligent" machine and processes of its control. Information can also be filed in any matter with the use of an interrupted entry and regard it as information having no visible material carrier. This version of the applicable model of the filing may be used for a fundamentally new kind of computer technology that may be used for creating a required form of intelligence located in the air, vacuum or in any matter, through individual pulses of a special adapter to a computer.

Brief name: FILING OF INFORMATION IN ANY POINT OF SPACE-AND-TIME

Main idea:

International information intellectual novelty registration chamber submits the intellectual property for registration to the International Register of Global Systems of Information, this property being acknowledged, as a creative activity, by the Academic Council of the IIINRC and by other structures as

MODEL

The present Certificate-License is a document that entitles the owner to use this information-intellectual novelty as a property in international markets of all countries of the world.

Chairman of the Chamber,
full member of the International
Academy of Informatization
and the New York Academy of Sciences
