Discovery, invention, novelty (technology, project etc.): **PRINCIPLE**

Grabovoi Grigory Petrovich

Annotation:

A property of matter is discovered that makes it possible to receive practically immediately a necessary form on the basis of a single program incorporated to some interval of time (proof certified by a protocol is available). Computer technologies make it possible to ensure control of matter, recovery of organism tissues and its safety, control over machines, creation of matter by the principle of transferring the time to any matter - a principle of non-destructiveness of the time structure under changes in space; source of energy from the time of past events is unlimited, i.e. any event of the past can be split up by an infinite quantity of methods including also the method of a feedback - control of the time of future events. Actually, when using an applied apparatus on a conceptual basis, the time of past events can be used. Consequently, in the author's opinion, any matter may be recovered from the set of "random" events in any time interval, and this means the illogicality of any destruction.

Brief name: TIME IS A FORM OF SPACE

Main idea:

International information intellectual novelty registration chamber submits the intellectual property for registration to the International Register of Global Systems of Information, this property being acknowledged, as a creative activity, by the Academic Council of the IIINRC and by other structures as

PRINCIPLE
